

ABSTRACT

Title: Stack of games for development of coordination abilities at summer camps

Goal: The goal of this work is to create a stack of games, which are suitable for the development of coordination abilities in the environment of a summer camp. These games and the theoretical basis should provide an appropriate level of information needed for composing a game programme suitable for the development of coordination abilities.

Methods: The theoretical part was created by conducting a literature review. Practical part - the stack of suitable games is based on literature review and personal experience.

Result: Creating a stack of games suitable for coordination development within the programme of a summer camp.

Conclusion: Thanks to the contribution of this work, a stack of games is created and a theoretical basis of coordination abilities development is summarized. It is a leaflet and inspiration for everyone who wants to work with kids at summer camps in the hopes of healthy movement development. The stack will also be published in periodicals determined for practical use on children's summer camps and therefore publicly available to everyone mentioned above.

Key words: school-age, movement coordination, camping, movement programme
