

SFUMATO® and its application in practise at two-class school in Horní Dvořiště in the school year 2006/2007

SFUMATO® methodics uses a special technique of reading. Its methodical steps simulate slow-motion process of perfect performance of adult reader, which is automatized. Substance of SFUMATO® consists in fluent passing of fixation eye motion to saccadic eye motion from one to another in exact succession.

This technique is based on:

- perfect knowledge of letter details
- initial long exposition of speech sounds („calling“)
- legato (bound) reading, during which an eye is passing in exact succession from letter to letter before the voice exposition.

SFUMATO® prevents problems, which outlast at other reading methods.

After going through several seminars and summer school I have utilized this technique at teaching of reading in the first class at two-class school in Horní Dvořiště. Pupils worked very good and at the end of the school year 2006/2007 they all read fluently with understanding and without any problems.
