

Annotation

Key words: social support, faith, belief, pozitiv psychology, hierarchy of needs, nursing, patient

Nursing understand human being like holistic object and try to do not forget any human needs according Maslow hierarchy of needs.

The goal of bachelor thesis is to analyze to faith like social support. Theory part of the thesis discuss social support and faith. I try to explain these two problems and their connection with positive psychology and so one.

In part of research I choose a research of kvality by nostandard interview and I spoke with five patients from Charity home care in Pardubice. I asked them about social support from their family and friends and how important is faith in crisis connection with their chronical disease for them.
