

Annotation

The paper deals with problematics of asthma at children. In the theoretical part there is global information about asthma, its ethiology, diagnostics and treatment. There is theoretical information about life quallity included in this part. I wanted laymen to understand it so it's written in the simple way. The practical part is directed on the level of limitation caused by asthma at children. The other goal of the research is to explore their feelings connected with asthma and how are they educated in connection with using inhaler and other medicaments.
