

Abstract

The diploma Thesis will focus on the general description of the expression of temporal quantification by non-native speakers of Czech in written speeches. Based on professional literature, the graduate will define time indicators, in the next step she will analyze the most frequently used textbook series of Czech for foreigners - Czech step by step by L. Holá, in which she will monitor the presentation of time data, both grammatically and lexically in terms of the range of indicators with regard to the degree of language acquisition, but also in terms of the way of presentation of the indicators. In the next part, an analysis of the occurrence of time indicators in the Merlin student corpus will be performed. The scope of use of time indicators will be monitored with regard to the level of knowledge according to SERR, the degree of accuracy of the indication of time quantification and the error typology of time means.
