

Title:

Problems in the pronunciation of German numerals by Czech speakers

Summary:

The aim of the thesis is to find difficult phenomena – as far as pronunciation is concerned – which occur in German numerals. At the same time two groups of students are compared. These groups have different teachers and differ in the length of their learning German. For the research there was used the method of observation which was carried out through recording of the pronunciation. Afterwards the recordings were analysed.

According to the results of the recordings it is possible to determine phenomena which are difficult for Czech speakers but there were found no differences in the quality of pronunciation of the mentioned groups.
