

At the beginning of the work I appointed the objective to create a workbook which will be in conformity with the current priorities in education. It will fulfill the demands, which I have determined on the basis of analysis of the Framework Education Program, existing workbooks and other backup materials. It means that, for example, the assignments will be aimed at development of key competences, interdisciplinary relations etc.

The result of this work is a workbook of proper assignments (107) with author solution and a system of evaluation of the individual assignments. It also corresponds to the demands, which I have determined at the beginning of the work.
