

The objective of my work is record detailed information about chicane among children on the part of teacher and create preventive precautions databank. It should help against chicana. The thesis describes protagonists of chicana, class-relations and methods for diagnostics. It is also interested in teacher's competences that can influence preventively. Method of questionnaire survey were described teacher's experiences in chicane among children. In agreement with their answers was created preventive precautions databank. Some activities were verified by pedagogic experiment.

My results show that teachers already concern about problems of chicana and try to be preventing. Preventive activities are effective above all in case of longterm and intensive usage.

**Key words:**

chicane among children, preventive activities, teacher's experience in chicane among children
