Alzheimer´s Disease belongs to the most common forms of dementia. The occurence of this disease rises with increasing life expectancy of population. The reason of this Thesis is to point out some issues, which are caused by this disease and have some implication in the daily life. It is possible to show available forms of communication with pleople suffering from Alzheimer´s Disease. I have focused on the most convenient approaches – I mean the human approach, which is involved in Validation techniques. It describes other methods such as Basal Stimulation and Reminiscence therapy as well. The Special communication strategies are offered at the end of this Thesis.
