

The main target of my diploma thesis is to find how much the women are satisfied with their life, namely in life aspects, which are closely associated with gender problems. At first there is sketched when, where and who started to concerned with standing of woman in society. Next I describe the gender from biological view, then if the gender indicitive allocation of roles has the biological grounds or not. In the next chapter there're founded the grounds of gender indicative allocation of roles in the area of individual socialization, mainly in infancy period. In the fourth chapter I try to describe individual parts of life, where, in my opinion, the gender disparity the most reflexed is. This is concretely concerned the family field, employment, I deal the cult of beauty as well. The last chapter is about effort of European Union and about the achieving of identical standing of men and women, I lightly touch also the worldwide problem of woman's standing. The important part of this diploma thesis is questionnaire, what finds the satisfaction of men and women with their lifes, namely in life aspects, where are adherent to gender problematic. There's also regarded the influence of education in the qestionary investigation.
