

This thesis is dealing with the communication systems of deaf blind people. The theoretical part is focusing on the basic informations about deaf blindness - definitions, classification of deaf blind people, deaf blind personalities, the origination and the causes of handicap and syndromes which cause deafblindness. One of the chapters is oriented in compensation aids. The pivotal chapter is about the communication systems of the deaf blind persons. The purpose of my work is to map out the minority of deaf blind people in Czech republic, find out their communication potentialities and acquire informations about the problems that are facing during communication. The practical part of the thesis forms a research based on questionnaires for deaf blind people of the LORM association - society of deaf blind, one of the biggest associations of this kind today.
