

Assessment of the final Bachelor Thesis

Student: Veronika Vlčková

Titel of the thesis: The Rehabilitation of the total Achilles tendon rupture

Supervisor:Mgr Holubářová Jiřina

The final Bachelor Thesis by the student Veronika Vlčková on the topic Rehabilitation of the total Achilles tendon rupture comprises 80 pages of the text with reference to 24 sources from literature,2 from Websites.

The text includes 8 figures in the text.

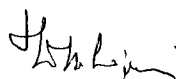

The Thesis is supplemented by 15 photographs, showing a striking improvement as compared with the patient's initial state. There are also examples of therapeutical exercises..

The author selected a set of tables well presented with captions and explanations which show the present state of the patient. I consider this assessment to be well presented and easy to overlook

In conclusion the author enumerates the diagnostical and therapeutical procedures she knew how to adapt to the actual state of the patient.

The Thesis is excellently prepared and responds to the requirements for the Bachelors Thesis and I therefore recommend it for defence.

Assessment of the Bachelor Thesis..... *excellent*

Prague the 10th May 2010-.
