

ABSTRACT

This thesis is considering man's personality and its influence with sportsman's performance and career in paragliding sports. It investigates Sportsman's personality and characteristics of his interests as a permanent file of qualities gathered by questionnaire. Consequently it compares measured components affecting sport performance. The goal is to describe, analyze and compare effects of sportsman's personality over chosen competitive pilots from Czech Republic and their sport performance.

Main method to complete the data is questionnaire for pilots of diverse level of performance.
