

I am dealing with Messianic myth, graphically designated as U. This U marks the descent, the suffering in the abyss of humanity and redeeming output back, as can be read in the Apostolic confession of faith. This path is undergoing God in several mythologies, God's representative, or the divine king. The work covers issues of archetypal, universality, and continuity of the myth in various religious systems in history. I ask also enquire for his ethical and anthropological meaning and significance. The following is mapped sense of archetype of descending God, natural vegetative mythology, as in Christianity and Luria's Kabbalah . It is not possible to miss the interpretation of myth, an archetype of consciousness and unconsciousness. I am trying to highlight here the importance of myth U in relationship to the creation and his theology. The result of this work should be an overview of possible reflections of the myth U in different mythologies and today's man faith. I am going to try to prove its continuity and meaningfulness of relating the man to God.
