

To move freight transport from overloaded roads to railway is a frequently discussed topic. In this paper we focused on the evaluation of the importance of rail freight, our example was the Královéhradecký region. In the paper we judge if the evaluation of the rail freight will be higher in regions with worse road locations and conditions. Attention will be also focused on position of the rail freight with the growing size of regions. Another view of this paper is the evaluation of importance of the rail freight with growing quantiles and structures of companies with discussing other factors which may affect importance of rail freight.

Key words: transport, railway, freight
