

Abstract

The graduating thesis (Bachelor of Science, B.Sc.), "Revitalization of an Industrial Facility: School Geography Project" is organized into two parts. The theoretical section addresses the theory and practice of critical thinking and project-based learning. I conducted a teacher survey in order to assess the utilization of project-based learning and critical thinking in elementary and high schools in the City of Krnov.

The second part of the thesis proposes "Project Karnola 2020", to be completed by learners starting in Grade two. The project asks learners to develop possible utilization options of an old industrial facility deemed as a historic site, Karnola. The resulting proposal would be presented to the municipal government of the City of Krnov.
