

## Resume

In my work I am describing and analyzing a wide range of legislation governing the creative work in the field of industrial property. It is clear that this course of economic life enjoyed wide attention not only in the domestic law, as well as transnational law, both in the context of global and European law.

As follows from the introductory chapters, although industrial property rights is an integral and important part of the economic life of almost every business, there is no consensus among experts in public opinion, which issues are part of an industrial property and which are not. To a large extent, these discrepancies are caused by lack of legal definition of industrial property.

Although this concept is logical in the sense that it does not intend to circumscribe the *de lege lata* industrial property in order to prevent accidental closure of the legal concept for the future. But on the other hand, in some cases complicates the interpretation of legal provisions in force, which leaves the blurred boundaries of industrial property and the dual perceptions of the concept. It thus contributes to legal uncertainty, for example, the enforcement of intellectual property when it is not clear how the broad range of subjects of industrial property is Act No. 221/2006 Sb. On the enforcement of intellectual property rights and amendment of laws on industrial property protection apply.

A substantial part in my work is devoted to the analysis of the creative activities of industrial property. As the most important issue appears to inventions and patent rights. However, following an equally important part, utility models, industrial designs, plant varieties and protection of topographies of semiconductor products. All these objects of industrial property are characterized by the legislature in a special law, and thus emphasized their importance and so thoroughly devoted to different legal rules.

The final two chapters deal with themes that are common to all subjects of creative activities. It is a transfer of intangible property rights and enforcement of intellectual property.
