

Téma diplomové práce	<b>Current approaches in the treatment of diabetes in pregnancy</b>
Jméno studenta, studentky	<b>Pinar Kucuk</b>
Jméno vedoucího diplomové práce	<b>PharmDr. Martina Čečková, Ph.D.</b>

## I. Posudek vedoucího diplomové práce

The submitted diploma thesis is written in English and reviews the current knowledge on the management of pregnant women suffering from diabetes mellitus.

The author of the work, Pinar Kucuk, worked up the thesis independently, although it took her some time to become acquainted with the topic and to orient herself in scientific literature. However, during elaborating the thesis, the student showed her interest in the topic and approved the skills in working with the scientific sources and databases.

The work is well structured and fulfils the settings of the thesis. Therefore I consider it to be suitable for the defence and evaluate it as very good..

Navrhovaná klasifikace **very good**
