

The first part of my work is focused on the definition of homosexuality and clarifies some concepts and a summary of its history. Registered partnership is explained there, including its advantages and disadvantages. Furthermore it also focuses on the importance of family for the child and review of the types of foster care. And finally, first part summarizes various factors that influences children's psyche.

The second part described the results of my survey which is focused on the public image of child custody to gay couples. It consists of several reactions collected from various chat forums and the most representative opinions obtained from questionnaires. The work is accompanied by five case studies and opinions from among homosexuals.
