**ROLE OF EVAPORATION IN THE HYDROLOGICAL
BALANCE OF SMALL CATCHMENT**

bachelor thesis - MICHAL TĚREŠ

Abstract

This bachelor thesis called "Role of evaporation in the hydrological balance of small catchment" uses the measured data from an experimental drainage basins Zbytiny in the source area of Blanice in Tmava mountains. Its aim is to find appropriate ways of calculating a more accurate determination of the proportion of evapotranspiration for water balance of small watersheds with different land use cover.
