

The nightlife environment is a place where young people frequently come into contact with the drug, compared with the general population there is significantly higher prevalence of current use and experiment with illegal drugs in particular. This environment is poorly covered by preventive and harm reduction services for recreational drug users, in addition they cannot be financed under the standard grant procedure because there are no standards to allow their certification. The aim of the thesis is to create standards of professional competence of service providers in the nightlife environment. The technique used is a theoretical analysis of the available resources, and expert assessment of the draft proposed standards. As a source for analysis were used scientific publications, existing guidelines and critical assessment of experience from the implementation of services within the project Safer Party. The output of work is standards proposal. Further, the particular issue of position of these programs in system of drug services and testing of synthetic drugs are discussed.
