

Summary

The topic of my graduate work is the joinery in the district of Nymburk. The theme I chose the light of the fact that I work at the Regional Public Health of the Central Region based in Prague, department of hygiene, as this problem often encountered in the performance of state medical supervision.

The aim of this work is to highlight the presence of factors in working environment, related to work performance in the carpentry workshop. An essential element of my work is the development and completion of the questionnaire. These were drafted with the operators or their representatives in the joinery workshop in the exercise of public health surveillance and evaluation. Evaluation questionnaires, I came to specifying the most frequent factors in work environments. Based on this finding, further work has focused on definition, incidence, effects and health from the adverse effects observed factors in working environment.

Part of this work is the practical part, which is devoted to risk assessment in a carpenter's premises, where the excesses have been factors in working environment.
