Student's name:

Andreas Andreou

Title of diploma thesis:

Rehabilitation after total hip replacement operation.

Goal of thesis:

To describe clinical casuistics of patient with diagnosis "status after total hip replacement".

1. Volume:

* pages of text	44 pages of text
* literature	21 including 5 web pages
* tables, graphs, appendices	7 tables without description and numbers, 7 pictures in text, no appendices

2. Seriousness of topics:

	above average	average	under average
* theoretical knowledges		X	
* input data and their processing		X	X
<i>Data in theory part are average but data in special part are under average.</i>			
* used methods		X	
<i>Used methods are average, but some suitable methods miss.</i>			

3. Criteria of thesis classification

	evaluation			
	excellent	very good	satisfactory	unsatisfactory
degree of aim of work fulfilment			X	
<i>The casuistic was described as have been possible and there is also theoretical part. But special part what should had been approximately two times longer then theoretic part, has only 12 pages and theory part 24 p.</i>				
depth of analysis of thesis				X
<i>There is general construction of whole work, there is no complex view on the patient and there is missing examination and therapy some important region of body related to hip region.</i>				
logical construction of work		X		
<i>The work has consequences of each steps, there is only very general construction of whole thesis.</i>				
work with literature and citations			X	
<i>List of literature has web pages, but there is no information about author a date. In the text, page no. 18 and 20 there are some web pages which aren't in list of literature.</i>				
adequacy of used methods				X
<i>During hip replacement my be damaged some of nerve way. Why didn't you examine adequate neurologic tests for function of lower extremities? There is no adequate information about investigative technics, e.g. Muscle lenght test - there is only "adductors", but it is not possible to know which adductors do you mean and most of muscles are missing.</i>				
design of work (text, graphs, tablels)			X	
<i>The work is very general, in the special part there is written name of patient (it mustn't be there). There is no numbers of tables and list of tables.</i>				
stylistic level			X	
<i>Whole thesis is written in short version of all chapters and very generally and in special part there are very short chapters without adequate description of patient state.</i>
