

ABSTRACT:

This bachelor thesis focuses on the management of church kindergarten (CK). It deals with the specifics of the CK and differences due to the municipal kindergarten. The aim is to compare sub-areas of management of CK and municipal kindergartens. Based on this I would like to find out whether there are differences between church kindergarten and municipal kindergartens management. The work should expand the awareness of professionals and managers and to facilitate the orientation of the church kindergarten, especially for beginners. Legislation looks at religious schools like private schools, but it is a separate category. In the practical part completion of a questionnaire and guided interview was chosen as the research method. The research focuses on the differences in the areas of local church nursery and municipal kindergarten management. Another endpoint is the view of managers on the church kindergarten. Since these differences are mainly legislative this is rather supplement to the theoretical part, where differences and specific have already been revealed.
