

Abstract

Title

A Look at the Future of Physical Education as a Primary School Subject

Aim of the Thesis: The aim of this thesis is to make a prediction of the development of physical education on primary schools in 2005 to 2010.

Method: A total of 87 respondents were taken into the research. All of them teach physical education at upper primary schools in South Moravia. An e-mail questionnaire was sent out to all these schools to collect data.

Results: The results show that physical education will continue to strive for strenghtening health and propagating movement. Material means and the quality of pedagogues' education will be the key factors influencing primary schools' physical education.

Keywords: Physical Education, General Education Programmes, Health, Movement, Sports
