

SUMMARY

This thesis called „Preventive programmes aimed at reduction of incidence of HIV/AIDS and other STDs“ presents the basic description of sexually transmitted diseases, evaluates and identifies the trend of their presence in the Czech Republic as well as the impact of injection users at the percentage of infected people.

Further on, it tracks down the accessibility of preventive activities for injection users of drugs, describes the realization of preventive programmes and the participation of governmental and non-governmental organizations on their implementation.

Financial resources used for the prevention of HIV/AIDS and other STD are also discussed with a focus at funding of the risk behavior population.

This bachelor thesis provides proposals and suggestions that aim to improve and interconnect different organizations addressing preventive activities to reduce the incidence of HIV/AIDS and other STD.
