

Abstract

The focus of this Bachelor's dissertation is International Classification of Functioning, Disability and Health (ICF) and its applicability to occupational therapy initial examination. This dissertation is divided into sections: theoretical and practical.

Basic terminology as well as the ICF framework, goals, philosophy, development and the overview of its components can be found in theoretical section. Moreover, it describes the links between rehabilitation, occupational therapy and the ICF. The end of the theoretical part gives information about occupational therapy examination.

Practical section explores possible use of the ICF in occupational therapy initial examination. The main goal of practical part is to create an occupational therapy initial examination form based on the ICF and to apply it on patients. This form ought to be practically used by The Department of Rehabilitation Medicine, 1st Faculty of Medicine, Charles University in Prague and General University Hospital in Prague.
