

Shanghai versus Hong Kong: Global economic and transport competition

Abstract

The main objective of the work is to compare global position of two Chinese cities Shanghai and Hong Kong. The first part compares financial position of the cities, which comes out from the historical background of the cities and actual economic situation. The global transport competition in ship and air transport is compared in the second part of the work. Final analysis summarises the results and comes out with the statement of stronger city. There is a maximal effort of an actual information and a visual presentation via maps and graphs.

Keywords: Shanghai, Hong Kong, China, global position, competition, finance, transport
