

## **ABSTRACT**

**Title:** Evaluation and comparison of the success in gaming activities of libero with hitters in the mens volleyball European Championship 2011

**Objectives:** The main objective of this thesis is comparison of libero and hitters. This thesis focus on pass after servis from oponent team and on field game. We will achieve results about succes rate of libero and compare those results with results of hitters, on European championship 2011 in men voleyball, in the same category.

**Methods:** In this thesis is used the method of indirect observation, thanks to video. It was recorded success of passing and collection via line method. In order to classify the quality of passing and collection, it was used five-point scale.

**Results:** The results confirmed all the research questions, so we are convinced of the quality and indispensability of libero in Volleyball.

**Keywords:** Volleyball, individual game activity, libero, European championship, statistik
