

Theme: Academical autonomy of the universities

Abstract

The theme of this rigorous paper is the system of the academical autonomy of the universities in the Czech Republic. In the paper has been used the comparison with the german universities and with the system of the academical autonomy in Germany.

In the paper we can find the theoretically part, which investigates the terms like Autonomy, universities, public corporation etc. In this part I tried to find the different characters for all these terms.

The paper has also its practical part. In the practical part have been used my experiences from my practices in the academical autonomy on the level of the faculty and on the statewide level. Because of this experiences I could use in the paper the practical informations about the functioning of the various academical authorities in their usual life. I mentioned also the examples of the problems that has been solved by the academical authorities, like e.g. housing grants, social grants or working of the students.

The rigorous paper is dividend into six parts. In the first part I tried to clasify the term „Autonomy“from the theoretical view. The second part of the work is focused on the institut of the universities. I mentioned the university from the view of the administrative law, I spoke about the position of the universities in the Czech legal order and I did the comparison with the German law. The third part is focused on the autonomy on the universities, so it means here we can find the connection of the first part with the second part. I mentioned the autonomy of all levels, it means autonomy of the faculty, university and autonomy on the statewide level. The fourth part is about the Student chamber of the Council of the universities as the highest body of the student's autonomy in the Czech Republic. The fifth part of the paper is focused on the cooperation of

the Czech autonomy leading bodies with other european countries, especially with the Slovak autonomy leading bodies. In the last part of the work I spoke about the concrete problems that has been solved by the academical authorities.

This paper should bring the completely view on the academical autonomy and all its levels, especially focused on the highest level of the autonomy, which is till now very less mentioned in the special literature.

The list of the keywords:

Autonomy – Samospráva

Universities - Vysoké školy

Public corporation – Veřejnoprávní korporace
