

Abstract

A dissertation deals with analysis of business information systems, which are offered to medium-sized companies. A target of my dissertation is to provide relevant information to staff members, who are faced with a decision of choosing business information system. The first part of my thesis is attended to theoretical level of ERP system. It characterizes ERP systems, their history, architecture and their implementation problem. Next chapters are targeted to Czech market area with business information system. Main part of my dissertation is formed by analysis and interpretation of information, which have been provided by respondents, who offer inland ERP product given to segment of small to medium-sized corporations. At the close are chosen key guides summed up.
