

Abstract

Title:

Progress of discipline precision landing based on the development of a circular parachute

Objectives of work:

The aim of this work is to map the history of skydiving with a focus on racing discipline of precision landing and on the development of a circular parachute. Due to insufficient number of compact resources and web sites, so the work becomes the file that holds the issue in a comprehensive manner and develop a unified overview of the analysis problem.

Method:

This is a theoretical work, the kernel of the work will be at tracing specialized publications, journals and websites, collecting information, filtering the relevant data in their comprehensive use.

Results:

Objective of thesis was largely achieved. It turned out that the topic is very broad to draw up a detailed summary of the entire history of the research question. The topic was therefore processed generally and is more like a preview than a perfect description. Intended overview was given.

Key words:

Skydiving, parachute, competitive discipline, precision landing, history.
