

## **Abstract**

The thesis deals with integration of the topic Medicine and Pharmacy into secondary education curriculum. The work is divided into four parts. First part pursues the content of medicine in the curriculum documents. Second part is devoted to comparison of educational systems in the Czech Republic and Slovenia and analysis of Czech and Slovenian textbooks for secondary schools. Third part contains special texts for teachers of secondary schools. It also includes basic information about pharmacy as well as other materials, which can be used in education. Thesis also contains ten laboratory works.
