

Abstract (in English):

Bachelor thesis entitled „Tercial education for teachers of children and pupils with a hearing handicap in the Czech Republic – a description of current state“ will focus on teaching courses dealing with the education of persons with a hearing handicap. The work deals mainly with special-pedagogical disciplines whose graduates pursue with the education of individuals with a hearing handicap. The work is divided into theoretical and practical part. The first part contains a summary of the history of education for people with a hearing handicap, defines terms that occur at work, for example surdopedy or medical and socio-cultural approach to the problem of deafness. There is also a list of Czech legislation relating to education of persons with a hearing handicap. The practical part is further divided into two sections. In the first one, the information from curriculums and syllabi of relevant courses is summarized. Based on the analysis of syllabi, the form, the way and the content of teaching selected fields at specific universities is indicated. In the second section the results of the electronic questionnaire responses of surveyed fields are analyzed. Based on particular syllabi of examined courses and a questionnaire survey this thesis explores approaches to the education of future teachers for children and pupils with a hearing handicap. It also tries to formulate the image of the current form that teaching courses in the Czech Republic have. This bachelor thesis also wants to find out how teaching at Czech universities is perceived by students themselves, what kind of attitude they have and what kind of knowledge they take away from school. An appendix with a lot of detailed information is also included in this thesis.
