

TITLE:

School information systems at secondary schools in Liberec region

AUTHOR:

Ing. Petr Hujer

DEPARTMENT:

The Center of School management

SUPERVISOR:

Ing. Petr Svoboda Ph.D.

ABSTRACT:

The bachelor thesis deals with mapping and comparison of information systems at secondary schools in the Liberec Region.

In the first part the author tries to compare 5 strongest products among school information systems on the Czech market. In the second, research part there is mapped how many schools use these products and whether they are satisfied with the products.

The thesis is based on data about the systems which is available on the companies' websites, in promotion materials or demo versions of the programs. The research part processes the results of a survey.

The main benefits of the thesis for the school management include:

- comparison of the products and their features
- purchase prices and yearly fees
- switch from one product to a competing one
- quality of an information system and consecutive system of education of the school staff
