

Abstract

The topic of this thesis is forest park's Bažantnice mapping. The thesis suggests the way of application of botanic terrain education. Botany and dendrology is one of the main educations question on elementary and secondary school. Park Bažantnice can be used in science lesson for its high potential. The thesis is divided into two parts. The first of them summarizes different types of the terrain education and focuses on didactic using of the park Bažantnice. The second one deals with the station mapping and describes way of data collecting and adapting. Accompanying pictures and generated maps are included in appendix at the back of the thesis.

Keywords: dendrology, biology, botany, education, park, Bažantnice, Kladno, mapping, herbs, woody plants, terrain education
