

Abstract

Title:

Analysis and comparison of chosen game activities of goalkeeper during Euro 2012.

Objectives:

The main objective is to analyse chosen defensive and offensive game activities of goalkeeper.

Partial objectives: To compile a ranking of goalkeepers according to the success percentage in chosen defensive and offensive game activities of goalkeeper.

Methods:

For getting information there were used indirect observation in this Bachelor thesis. The indirect observation from videorecords was time postponed.

Results:

The results show, that in contemporary football, goalkeeper has to be good at footwork more than in the past. During 24 matches goalkeepers were passing after receiving for 504 times with 83,9% success. The running out for centered balls is also an important part of goalkeeper's performance. In this game activity safe catching prevails over punching a ball. In observed matches goalkeepers ran out for 136 times with 78,3% success. This information shouldn't be omitted in goalkeepers training.

Keywords:

Goalkeeper, game activities of goalkeeper, running out for centered balls, passing after receiving a ball
