

Abstract

This Master thesis deals with the issue of environmental protection in mining. Mining has negative impacts on the environment and the goal of law on this field should be the minimalisation of these negative impacts. This master thesis offers a complex overview of issues brought about in mining from the initial stage of exploration and prospecting to its final stage of reclamation. First and second chapter of this thesis give a brief overview of mining issues and state aims of this thesis. Third chapter deals with the environmental protection in the stage of exploration and prospecting, fourth and fifth chapter allow an insight into delimitation and mine opening procedures. Sixth chapter deals with mining itself and environmental protection during this process. Seventh chapter addresses reclamations and mine closures. Last chapter is conclusion.
