

## **ABSTRAKT**

Oršolíková L., Natural compounds influencing wound-healing.

Diploma thesis 2012/2013, Charles University in Prague, Faculty of Pharmacy in Hradec Králové, pp.58.

Biologically active substances contained in plants are used for wound healing. Selection of plants is mainly focused on plants containing tannins and flavonoids, which are complemented by other long-term use of plants, and containing iridoids, saponins, essential oils, mucilages and anthraquinones. The health of the skin and improved wound healing also expresses biologically active substances contained in food.
