Abstract

This thesis examines the relationship of verbal intelligence and social cognition through verbal subtests of Wechsler intelligence scales for adults (3rd revision) and Differential Self and Complexity of representations of People and Understanding of Social Causality scales in Thematic Apercepčního Test.

The theoretical part introduces the concepts of intelligence and social cognition, as well as psychological tests of intelligence tests and apperception techniques. The theoretical part also focuses on the social intelligence as an answer to the question of the relationship between intelligence and social cognition.

In the empirical part of the thesis data collected from 30 probands is processed who underwent testing above mentioned psychological tests. The data are processed with correlation and factor analysis. The conclusions statistical processing are in the thesis further developed in the context of the theoretical base of scientific knowledge. The discussion points to limits of the testing and suggests options for the future researchs.
