

Goal of this thesis is to create an application for writing reviews of papers in mathematical journals. It provides centralization of all processes, simplicity and effectiveness of operations. Papers, i.e. metadata and scanned PDF files, are stored on a disk of server. The application handles rights to access to the papers according to the current state of them. Automatically generated emails are sent when some editing of paper is done. Implementation of this thesis is a web application. It is written in programming language PHP and it uses database MySQL.
