

Annotation

In my exam I focus on the occurrence of NKS (communication disorder) in pre-school aged children. I am interested in speech disorders that commonly occur in this age group. Individual disorders describe - how they express themselves and what the individual impact is on the child, whether the child is aware of this disorder and how.

Furthermore, I will focus on speech therapy intervention, focus on the way how these children are being treated in nursery schools. Whether the schools have their own speech therapist or if the teachers leave the responsibility of treating this disorder simply to the parents.

It also analyze the situation in the first half year of the first class of the primary school. Whether NKS (communication disorder) has the same occurrence or a decrease is rather noticeable.
