

ABSTRACT

Title

Case study of physiotherapeutic care of patient with a diagnose of Guillain – Barré syndrom.

Summary

This bachelor thesis was elaborated during my continuous practice at the Malvazinky Rehabilitation Clinic from January 28th to February 22nd of 2013. The thesis is divided into two main components: general and special. The general component contains theoretical findings about Guillain – Barré Syndrome disease and all its subtypes. The special component consists of a detailed elaboration of a case report involving a Guillain-Barré Syndrome disease patient. This case study includes an initial kinesiology examination in which basis targets and therapy process have been set, and a description of the applied therapeutic methods followed by a final kinesiology examination after which the effect of the described therapy was evaluated.
