

ABSTRACT

The thesis deals with environmental education for the pupils of primary education in the natural localities near Kolín and shows teachers how to undertake the so called place-based education.

The theoretical part is focused on the characteristics of excursion and environmental education that are based on available scholarly literature. Furthermore, it discusses documents which delimitate environmental education as a cross-disciplinary topic at primary schools and describes natural conditions in the chosen region.

The aim of the research part was to find out which localities teachers use for outdoor activities and to create a methodical proposal of environmental excursion for the most frequently visited localities. Subsequently, these excursions were realized.

KEY WORDS:

- environmental education
- excursion
- qualitative research
- Central Bohemia region
- place-based education
