

**Abstract** (Useful Plants of the Family Leguminosae (Fabaceae))

This bachelor thesis focuses on cultivated plants of the Leguminosae family (*Fabaceae*). It presents theoretical information about characteristics, occurrence and utilization of leguminosae plants (*Fabaceae*).

The thesis includes a table with information about accessible natural history textbooks for elementary schools which deals with the leguminosae plants. The practical part of work also encompasses a questionnaire focusing on legumes consumption. The main outcomes of this bachelor thesis are practical exercises and education materials which might be helpful when teaching natural history classes at elementary schools.
