

*Abstract:*

This thesis is dealing with the influence of local varieties on approved pronunciation of PTH. Thesis is trying to specify the basic deviations in pronunciation of Mandarin Chinese according to phonological systems of local varieties. Phonological system of PTH is compared to the system of local varieties. Based on the differences between phonological systems of initial, finals and tones, is set the solution of the appearance of local PTH. This thesis is not back up with local research of PTH, because this kind of research is not a part of our work. We are aware of the lack of evidences caused by absence of local research. Our conclusions are confirmed only in additional sources. Even all this thesis provides the basic knowledge of the most common pronunciation deviations of PTH in China. This work could provide the basic information for additional research focussed on this topic.
