

## **Abstract**

I have chosen the subject of Inheritance procedure in order to get more familiar with this area of law. With the help of effective legal regulations this thesis was aimed to make a thorough analysis of the inheritance procedure and to find a better solution to some of the problematic aspects of the current legislation. In the introduction I briefly deal with some of the historic events. At the same time, I mention changes which will be introduced by the new civil code. Then, the inheritance procedure is generally characterised and I deal with the authority and competence of the courts, with the subjects of the inheritance procedure and with its delivery. The next part looks into the process specifically. It includes the following chapters: Initiation, Further progress, Inheritance administrator and the preliminary measures, Preparation of materials for the proceedings, Proceedings, Settlement of the common property of spouses, Inventory of assets and liabilities, Final resolution on the heritage, Overindebted heritage and Corrective tools. The chapters which follow deal with the dependencies among the inheritance, enforcement and insolvency proceedings. In the final chapter I summarize my suggestions which I concluded during the process of writing this thesis, as well as present my own attitude to individual changes that will be brought by the new civil code and the process regulations related to it.
