Number of supplements:	10
Year of apology:	2013
Key words:	Diabetic foot syndrome, podiatric, therapeutic materials for the healing of chronic wounds, nurse knowledge

Bachelor thesis examines knowledge of nurses caring for patients with diabetic foot syndrome. Furthermore it deals with the selection of dressings, including wet dressing therapy in relation to the type of the wound and its availability in the workplace. The theses are composed by two parts, the theoretical and the empirical one. The theoretical part describes: the skin anatomy, bones and muscles of the foot, podiatry, the diabetic foot syndrome (including prevention, complications and treatments), phases of wound healing, and also mentioned the new trends in the wound healing. The empirical part analyses the results of the research, which was performed in the follow institutes: University Hospital in Hradec Králové, home care agencies and the hospice.
