

Abstract

Title: Case report of physiotherapeutic care about patient with diagnosis after Meningoencephalitis.

Summary: This thesis consists of two parts – a general part and a special part. The general part summarizes theoretical basis of the disease. It explains the term of meningoencephalitis and represents its epidemiology and etiopatogenesis, clinical marks, possible complications of the disease, its diagnostics and cure.

The special part contains case report of physiotherapy care for a patient after meningoencephalitis. The case report consists of initial musculoskeletal assessment of the patient, performance of the therapeutic units and assessment of the effectiveness of the therapy. Case report was worked out on the rehabilitation clinic Na Malvazinkách in Prague at the time of continuous bachelor's practice.

Keywords: pssiotherapy, meningoencephalitis, tick-borne encefalitis, non-infected brain inflammation, viral diseases of the central nervous system.
