

## Annotation

This bachelor project is dealing with a hospital palliative care. It's based on suggestions from the patients and nurses site either.

Main goal of the theoretical section is to determine palliative care and its individual goals. Moreover, to determine basic needs of incurable and dying patients, to designate way of their monitoring and to realize opportunity to satisfy themselves. Needs of diseased humans are divided, based on holistic view, as a physical, mental, social and spiritual. The next goal is to offer the information.

Empiric section is divided into a two parts based on the rank of respondents. First part of investigation is about patients suggestions. Moreover, patients are divided as a men and women. Amount of the men and women answers is evaluated too. Second part of investigation is about nurses suggestions. Main method of investigation is a query sheet. Patients query sheet is oriented to their preferred needs and their satisfaction from nurses site. It's about how many information they have got about their disease and treatment procedure. It's about their apprehensions, too. Nurses query sheet is about to realize their knowledge of the palliative care. Moreover, it evaluates monitoring and saturation of basic needs of incurable and dying patients, way of information handling and their physical, mental, social and spiritual satisfaction.

Project confirms individuality of palliative care. It confirms its basic principles as securing of life quality, needs satisfaction, dignity and reduction of misery of incurable and dying humans.
